Agricultural and Pumping
Rate Summary

The following is a summary of Southern California Edison's (SCE) tariffs and programs for agricultural and water pumping customers.

Eligibility for all SCE agricultural and pumping schedules requires that 70% or more of the customer's electrical usage is for general agricultural purposes, or for general water or sewage pumping.

Large individual water agencies and other water pumping accounts greater than 500 kilowatts (kW) or 671 HP with 70% or more of the water pumped and used for agricultural purposes must take service on an agricultural and pumping rate schedule.

Agricultural and pumping customers are also eligible for various demand response programs. For information on demand response programs, please see the Demand Response Program Guide available online at ***www.sce.com/drp.***
