

Fresh California Sunshine

Harvest the power of the sun.

***T*ake advantage of California's abundant supply of sunshine and you'll save energy, money and the environment.**

Solar: Renewable energy that's good for the environment.

By choosing solar, you can help to preserve the environment now and for generations to come. Solar power produces no emissions or air pollution, making it an environmentally friendly way to supply electricity to your home.

There's never been a better time to "Go Solar" by taking advantage of incentives today, while they're at their highest.

The state's California Solar Initiative provides incentives of up to \$2.50 per watt to help offset the cost of purchasing and installing a qualifying solar photovoltaic system. Plus, you may be eligible to receive up to \$2,000 in federal tax credits if your system is installed before December 31, 2008 (consult the IRS or your tax consultant for details). Combined, these incentives can cover up to 45% of the total cost of your solar system!* And by completing an Energy Efficiency Survey as part of the program, you'll identify even more energy-saving opportunities in your home that will help you maximize your investment in solar power!

Ready to Go Solar? Visit www.GoSolarCalifornia.ca.gov, www.sce.com or call 800-799-4177 for more information.

Save energy, money and the environment.

*Actual percentage of cost offset by combined CSI incentive and federal tax credit will vary based on total project costs, incentive level and installation characteristics. Terms and Conditions apply. Program is funded by California investor owned utility customers and administered by Southern California Edison under the auspices of the California Public Utilities Commission. California customers are not obligated to purchase any full fee service or other services not funded by this program. Program began January 1, 2007 and runs for 10 years. Program is subject to change without notice. © 2007 Southern California Edison. All rights reserved.
